

October 31, 1949

Dr. E. L. Tatum  
Stanford University  
Department of Biology  
Stanford, California

Dear Ed:

We are sending cultures of the three strains requested in your letter of October 25. The adenine 35283 is presumably 35203 since there is no strain with the former number. Mary Mitchell said the histidine has reoccurred several times.

I shall write you shortly about the symposium.

Sincerely yours,

GWB:hl

G. W. Beadle
